Orator Dictation Server Hosting

Bytescribe now offers hosting of Orator voice-over-IP dictation servers. Now there is a great alternative to owning and managing your own dictation servers. Dictation server hosting is designed for companies that need complete control over dictation but want the servers to be managed in a data center. With Dictation server hosting, Bytescribe will completely set up and configure a dictation server and then give you complete control. Hosted servers are running the same Orator dictation software as on our Orator servers, but in a hosted environment. This means you don't need to worry about purchasing equipment, managing servers or worrying about power outages.
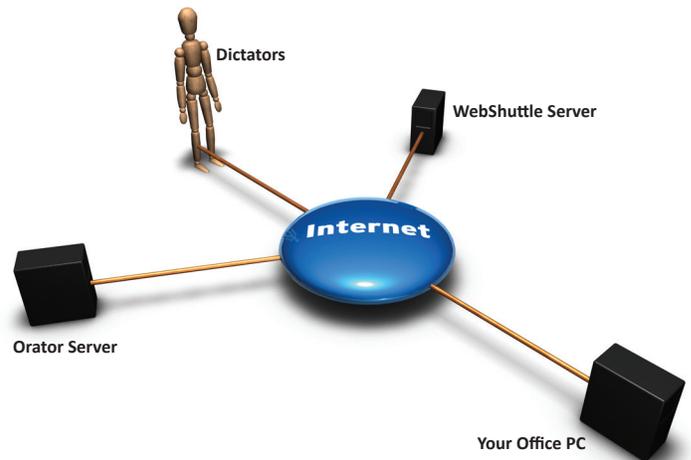

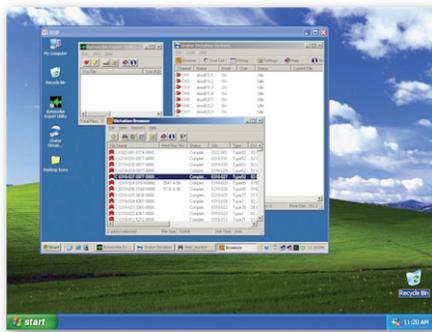

Dictation Servers in a Data Center

The obvious advantage of having the Orator dictation server in a data center is that you don't have to worry about hardware failure or losing power. The personnel at the data center are on staff 24 hours a day. They will take care of any server issue that comes up.

Access through Remote Desktop or VNC

You can access the Orator dictation server through Windows Remote Desktop or VNC. You can set up, manage and configure the dictation server from any Windows computer. There is no additional software that you need.

Easy Integration with Your Business Workflow

With Orator Hosting, you can usually be up and running in minutes, not days. Recorded dictation files can be sent to any FTP site or directly into our web-based WebShuttle platform which gives you an online interface to manage your business workflow.

Pricing

Bytescribe can customize the server and number of ports for the hosted server. Pricing is shown below:

4-port:	$250/month	16-port:	$550/month
8-port:	$350/month	20-port:	$650/month
12-port:	$450/month	24-port:	$750/month

Toll-free dictation: $.05/minute
Local calls from one area code: $50/month flat rate
Setup fee: $200

ADVANTAGES

1. No hardware to purchase
2. No telephone lines to install
3. Toll-free phone number for dictators
4. Servers reside in a managed data center
